

Your Name

Software & Machine Learning Engineer

Kochi, India | you@email.com | +91 90000 00000 | linkedin.com/in/yourname | github.com/yourname

SUMMARY

Engineer with a background in mechanical engineering and robotics, focused on full-stack development and applied machine learning. Experienced architecting containerised microservice platforms, building data pipelines, and deploying ML-driven applications. Comfortable across the stack from infrastructure to model fine-tuning, with a strong bias toward shipping reliable, maintainable systems.

TECHNICAL SKILLS

Languages	Python, TypeScript/JavaScript, SQL, Bash
ML / Data	PyTorch, Hugging Face Transformers, PEFT/LoRA, scikit-learn, pandas
Backend	FastAPI, Node.js, Kafka, REST APIs, microservices
Frontend	React, Next.js, Vite
Infra / DevOps	Docker, Docker Compose, GitHub Actions, Nginx, Linux
Data Stores	PostgreSQL, MongoDB, Redis, MinIO

EXPERIENCE

Chief Engineer (Part-time) — Clearbox (Stealth Startup)

Remote / London · Aug 2024 – Present

- Architected and shipped a healthcare platform of 20+ Dockerised microservices organised as a git-submodule superproject, spanning React/Next.js frontends, seven FastAPI services, a Node.js auth layer, a Kafka event bus, a MinIO data lake, and Postgres/MongoDB/Redis stores.
- Built an end-to-end questionnaire pipeline from UI capture through Kafka ingestion, ETL parsing and scoring, to Postgres analytics, with JWT auth and role-based dashboards.
- Set up parallel dev and prod Docker Compose stacks with hot-reload and GitHub Actions CI/CD, and resolved cross-cutting infrastructure issues across the stack.

Software Engineer — Example Company

Location · Jun 2022 – Jul 2024

- Developed and maintained backend services and APIs, improving reliability and reducing response times through profiling and caching.
- Collaborated with cross-functional teams to deliver features from design through deployment, with automated testing and CI.
- Mentored junior developers and contributed to code review and architecture decisions.

SELECTED PROJECTS

- LLM fine-tuning experiments** — Fine-tuned small open-weight models (1B–13B) with QLoRA for domain-specific tasks; benchmarked quantisation levels for edge deployment.
- Portfolio & deployment platform** — Self-hosted portfolio and project deployments using Docker, Nginx, and CI/CD pipelines on a personal server.

EDUCATION

M.Sc. Robotics — University of Birmingham

United Kingdom

B.Tech, Mechanical Engineering

India
