Junior Full-Stack Developer & Robotics Enthusiast with MSc from University of Birmingham. Skilled in building scalable web apps with React/Go/Docker and AI integrations (PyTorch/LLMs). Delivered MVPs for healthcare analytics and ROS-based robots. Transitioned from Mechanical Engineering via self-learning and hackathon wins.

EXPERIENCE

Chief Engineer (Part-time) | Stealth Startup, Remote/London | Jan 2026 – Present

- Architected and shipped the company's healthcare platform — a 4-layer system of 20+ Dockerized microservices managed as a git-submodule superproject. Stack spans React 19/Next.js/Vite on the frontend, seven FastAPI services, a Node.js HTTPS auth gateway, Kafka for events, a MinIO medallion lake (raw → bronze → silver → gold), and Postgres/MongoDB/Redis.
- Built the questionnaire flow end-to-end: browser capture, FastAPI Kafka producer on ingestion worker, ETL parsing and scoring, and Postgres analytics. Added JWT auth with role-based dashboards, healthcheck-gated startup ordering, and routed all browser traffic through a single Nginx reverse proxy.
- Ran parallel dev and prod Docker Compose environments with hot-reload bind mounts and GitHub Actions CI/CD, and debugged the awkward stuff along the way — Kafka topic auto-init, migrating to the official Redis image, an Nginx IPv6 healthcheck issue.

SCADA Engineer | Thames Water, Reading, UK | Nov 2024 – Jan 2026

- Created P&ID mimics and managed SCADA projects end-to-end, including TCP/IP/DNP3 protocol testing and handover.
- Automated data analysis/reports with Python/SQL scripts, reducing manual tasks by 50% for large datasets.
- Troubleshooting network issues with Thames Water teams, ensuring 99% uptime on SIM/CSL lines.

ML/Data Engineer (Freelance/Project) | University of Birmingham | Nov 2023 – Aug 2024

- Built data pipelines with 80% faster processing via feature engineering; deployed CNN/RNN models (20% accuracy gain).
- Applied dimensionality reduction/SVM for robotics tasks during MSc projects.

Software Engineer (Trainee) | Cognizant Technology Solutions, Bangalore | Dec 2020 – Jul 2022

- Trained in Java/Spring Boot; designed REST APIs and SQL schemas for microservices prototypes.
- Collaborated on requirement analysis for scalable apps, optimizing queries for 20% faster performance.

EDUCATION

- **MSc Robotics (Merit) | University of Birmingham, UK | 2022-2023**
- **BTech Mechanical Engineering (7.93/10) | Kerala Technical University | 2016-2020**

RELEVANT PROJECTS

- **Hospital Analytics MVP** | React/Go/Docker/LLM | Processed health data with FHIR; [\[link\]](#)
- **CV Analyser** | Full-stack (Flask/React/Docker/AWS); analyzes 100+ CVs/min via GitHub Actions CI/CD. [\[link\]](#)
- **Intelligent Hotel Robot** | ROS/SLAM + Q-learning/SARSA; navigated 50m² autonomously (Fusion360 design). [\[link\]](#)
- **Ad-hoc Agents Dissertation** | BREMEN/Decision Trees; 30% inference improvement on agent behaviors. [\[link\]](#)

SKILLS

- **Frontend:** React, Next.js, JavaScript, HTML/CSS, Express.js
- **Backend:** Go, Python (Flask), Java (Spring Boot), SQL/NoSQL
- **AI/ML:** PyTorch, TensorFlow, scikit-learn, LLMs
- **DevOps:** Docker, Docker Compose, Git/GitHub Actions, AWS ECS, CI/CD, NGINX
- **Other:** ROS, CUDA, SCADA protocols (DNP3), Fusion360, Agile

AWARDS & LEADERSHIP

- *June 2023* - Runner's up BEAR Hackathon (multi-GPU medical imaging), University of Birmingham
- *September 2023* - Student Ambassador, University of Birmingham
- *December 2018* - 1st prize in project expo, NIT Calicut
- *June 2017* - Founding Member and Vice president VJCET Robotics Club
